# CUSTOM TUBES

Our composite tube slides can be adapted to any shape: spiral tubes, straight tubes, meandering tubes, passageways. Manufactured using RTM injection technology, they offer a high quality finish, great mechanical performance and durability of the parts, made of polyester reinforced with fiberglass.

In both standard and custom tubes, it is possible to include translucent pieces so that you can see inside the tube and let the light through.

We work with advanced design programs to offer the best proposals to our clients. Designed according to the requirements of the EN1176 standard.

## AVAILABLE COLORS: (Color combination is also possible)

## *TRANSLUCENT PIECES*

For our tube slides, it is possible to manufacture the modules in a translucent material version.

These modules are placed at the top of the slide. The advantage of these pieces is that they allow light to enter the interior of the tube.

These parts are available for all of our mounting modules.
